

A Homage for Hermann Oberth

The following article is to pay homage to the first publication of Herman Oberth's legendary book "Die Rakete zu den Planetenräumen" in 1923, 95 years ago. The visionary rocket pioneer laid the theoretical and practical applications of modern space exploration.

The book – so far only available in German, was translated recently by a team of space engineers into English under the "under American Astronautical Society's" patronage.

The books is available at the De Gruyter Verlag (ISBN: 978-3-486-74187-2 or e-ISBN 978-3-486-74712-2).
